Interactive resume: paulpaul31.github.io

Final-year engineering student at ESILV (Data & AI major), currently on an exchange semester at Riga Technical University. Looking for a 6-month end-of-studies internship in Data & AI starting March 2027, with a strong interest in NLP and LLM evaluation, and open to a full-time position afterwards.

Professional Experience

Software Developer Intern (Data & AI), GIP Numih France – Rennes, France May – Aug. 2026
Designed a benchmark to evaluate how open-source LLMs perform on medical problems in French

- Built a reference set of 500 question-answer pairs drawn from 100 clinical reports covering 19 specialties (PARHAF corpus)
- 3-level scoring engine: lexical and semantic metrics (ROUGE-L, BLEU, BERTScore with CamemBERT-bio, SemScore with BGE-M3), medical factuality, and LLM-as-a-judge (Qwen)
- Clinical NLP pipeline for medical named-entity recognition (DrBERT-CASM2, IAMsystem) aligned with UMLS, SNOMED, ICD-10 and BDPM, extended with a dictionary of about 3,400 synonyms
- Ran inference and comparative evaluation of 18 open-source LLMs with vLLM on H100 GPUs (Scaleway), with the judge model hosted on OVH/Scaleway
- NiceGUI web app designed for non-developers: leaderboard, analyst table, per-model deep dive, review of every answer, model onboarding and custom scoring weights; unit tests and documentation

Education

ESILV — Léonard-de-Vinci Graduate School of Engineering, Paris-La Défense, France 2024 – 2027
Engineering degree (Master's level) — Data & Artificial Intelligence major, Computer Science track

- Courses: Machine Learning; Neural Networks & Deep Learning; Advanced Deep Learning; Information Retrieval & NLP; MLOps; Explainable AI; NoSQL; Advanced Probability

Riga Technical University (RTU), Riga, Latvia Sept. 2026 – Jan. 2027
Exchange semester — 1st semester of Master's year 2, taught in English, with a one-month intensive English course

- Courses: Information Retrieval; Machine Learning Algorithms; Computer Vision; Advanced Data Technologies; Business Analytics

Classe préparatoire MPSI / MP (engineering science option), Lycée François Arago, Perpignan, France 2022 – 2024

- Two-year intensive program in maths and physics preparing for the competitive entrance exams to French engineering schools; research project (TIPE): "Can temperature be used to increase a ski's speed?"

Projects

PI² project — Generative AI for the Leo Learning platform 2024 – 2025

- Year-long team project: generative AI assistant built into Leo Learning, ESILV's learning platform, to help students revise (explanations, targeted resources) — grade: 16/20

Personal project — Local LLM with remote access 2026 – ongoing

- 27-billion-parameter Qwen model running locally with llama.cpp (RTX 4070 Ti, i9-14900KF, 64 GB RAM), secure remote access (Tailscale, SSH); in progress: a secure web interface

Gomoku project — Game and game AI (Python) 2024

- Full game implementation and evaluation heuristic for the AI opponent — ranked 8th out of 250+ teams in my year

Skills & Interests

AI & NLP: Hugging Face (Transformers), vLLM, llama.cpp, LiteLLM, LLM-as-a-judge, prompt engineering, NER, evaluation metrics (BERTScore, ROUGE, BLEU)

Programming: Python (NumPy, Pandas, Matplotlib, scikit-learn, PyTorch, TensorFlow), SQL (Oracle, PL/SQL), MongoDB, basic C# and C++

Data & tools: Docker, Git, Linux/SSH, cloud GPUs (Scaleway, OVH), Kafka, Spark, NiceGUI, Streamlit, Adobe Suite

Languages: French (native), English (B1+ – TOEIC 665, one-month intensive course at RTU)

Interests: Triathlon; ESILV clubs Léo Survival (running & camping) and Léo Houblon (beer brewing); hardware (PC building); video games
